ROTATING UNIONS

water steam air hydraulic hot oil vacuum coolant custom applications

www.deublin.eu

Our aim: "To make every effort toward producing the best product of its kind on the Market".

This tenet serves as an incentive and an obligation in equal measure. Adherence to this policy has been responsible for our growth from a small garage shop to the world's largest manufacturer of Rotating Unions with a world-wide sales and service network.

Wherever water, steam, oil, coolant lubricants or other media have to be conveyed into or through turning machine parts, like rollers, shafts or spindles, rotating unions are employed in a wide range of industrial fields.

Developed in 1945, and continually improved as a result of practical requirements, **DEUBLIN** Rotating Unions are at the cutting edge of technology today.

DEUBLIN Rotating Unions – the industry standard. Our customers can rely on our engineering expertise, R&D capabilities, manufacturing techniques and more than 70 years of knowledge and experience.

Our product range is constantly being developed and expanded. In addition, we offer special solutions, customer specified variations and modular designs which enable us to provide users with the perfect solution for virtually any application.

Direct contact with customers and a close collaboration with the original equipment manufacturers provide the basis for continuous improvement.

Quality encompasses our entire enterprise. At **DEUBLIN**, reliable products at competitive prices and just-on-time deliveries are standards.

This, of course, requires an integrated total quality control system that is practiced in all areas of our organisation.

Quality is the result of teamwork!

DEUBLIN has its Corporate Headquarter in Waukegan, USA. For over 40 years the facilities in Germany and Italy have been producing for the European, African and Near Eastern Market.

Besides sales and warehouse facilities in almost every country in Europe, we also have company owned subsidiaries in Austria, Brazil, Canada, China, France, Germany, Italy, Japan, Mexico, Poland, Russia, Singapore, Spain, South Korea, Sweden and the United Kingdom.

Our customers can rely on our worldwide manufacturing and sales & service network.

Due to its Total Quality Management System **DEUBLIN** was awarded its initial Certification pursuant to DIN EN ISO 9001 in 1996 by the German Standard Institute. In October 2002 the re-certification followed accompanied by the initial Certification for its Environmental Management System pursuant to DIN EN ISO 14001.

Certified as an Authorised Economic Operator (AEO) since March 2009, **DEUBLIN** has established that its supply chain is **secure** and customs-reliable. For its customers, it means faster flow of goods and materials. This is a significant advantage for **DEUBLIN's** partners worldwide.

DEUBLIN sets new standards.

Attention!

For applications exceeding given limits and/or unlisted rotor connections, contact **DEUBLIN** for engineering assistance. Please indicate media, size, speed (RPM), pressure, temperature and requested connection. Please note our "Instructions of Hose Installation and Assembly of **DEUBLIN** Rotating Unions" on page 56. – **Dimensions in mm.**

Subject to both technical and dimensional changes without prior notice.

Sealing

Original rotating unions used the media pressure to maintain seal contact. Logic indicates that as pressure increases, so do the forces holding the seals together - more pressure = tighter, better sealing.

This is why they were called "pressure joints".

However, more pressure on the rotating seal face also meant more friction, higher torque and more wear. The resulting service life was not satisfactory.

DEUBLIN was aware of the disadvantage and applied "Balanced Mechanical Seal Technology", a decisive improvement.

This simply means the load or pressure on the seal faces is kept to a minimum regardless of media pressure, resulting in a freer turning union and in longer seal life.

Optimal balance ratio allows for a thin film of "lubricating" media between the seal faces.

In order to attain sealing in a non-pressurised system, the floating seal contact is maintained by the spring pressure (refer to sketch).

Keyed Floating Seal

Manufacturing

The entire **DEUBLIN** product range is manufactured at the cutting edge of technology from the very first drawing to the final production. Modern CNC machining centres transform highest quality materials into precision components. Cost-effective production is achieved by applying new technology and the most modern equipment.

Once assembled **EVERY** rotating union is dynamically pressure-tested for leakage as part of the final inspection procedure prior to despatch.

The core of a rotating union is the seal combination. Seal faces manufactured from tool steel, carbon graphite, bronze, ceramic, tungsten carbide or silicon carbide are micro-lapped to a surface finish of 0.025 RMS and an optical flatness of 2 light bands. To ensure the above specifications the near perfect flatness is tested under mono-chromatic light (refer to picture).

The **DEUBLIN** Performance System (DPS) focuses production on customer's demand. Through demand-oriented production, balancing of available resources and avoidance of non-value-adding activities the entire production process at **DEUBLIN** is tailored to the customer's own requirements. **Today a wide range of models can be dispatched within 3 working days.**

Micro-Lapped Seals

Thread Specifications used in this Catalogue

Symbol	Description	Symbol	Description
1/2 NPT	(American) National Pipe Thread	G 1/2	ISO 228 (DIN 259) Straight Pipe Thread
5/8-18 UNF	Unified National Fine Thread	M 22x1,5	ISO Metric Thread
1-14 UNS	Unified National Special	R 1/8	ISO 7/1 (DIN 2999) Pipe Thread (tapered external)
RH or LH	Right Hand or Left Hand	Rc 3/4	ISO 7/1 (DIN 2999) Pipe Thread (tapered internal)
Rp 1/2	ISO 7/1 (DIN 2999) Pipe Thread (cylindrical internal)		

Reliability

Years of experience, constant dialogues with customers, in-house and supplier innovations have enabled **DEUBLIN** to offer reliable rotating unions at the cutting edge of technology. The right seal combination compatible to the media guarantees the maximum service life for every particular application.

A clean and efficient warehousing and handling of the union is just as much a prerequisite for our customers as the adherence to the **DEUBLIN** specifications.

The market demands more products with a longer service life at more extreme parameters.

Besides new developments and the constant modification of existing products, it is above all better wear-resistant seal combinations that accommodate these market demands. **DEUBLIN** offers these seal combinations under the designation E.L.S. (Extended Life Sealing).

Service

For **DEUBLIN customer-orientated service** means: customisation and/or newly engineered unions for special requirements, an all-encompassing technical consultation by union selection either from the **DEUBLIN** facility or in the field by one of our representatives, short-term delivery of all selected components and, finally, fast troubleshooting of any and all problems.

Lengthy machine breakdowns are a thing of the past.

A broad assortment of unions is produced for stock and can be procured quickly. An automatic warehousing system enables all required components to be localised fast and effectively.

Lead times for special contractual products are only fractionally longer, for a modern and optimised production and assembly guarantee very short process times.

High-performance CAD systems warrant the realisation of special requirements such as the modification of an existing union or newly engineered designs. The customer receives in short notice the quotation including a technical drawing and price. The production of the rotating unions begins at that moment when the drawing has been confirmed by the customer and returned to the **DEUBLIN** facility.

Repair

Basically, all **DEUBLIN** Rotating Unions can be refurbished at the factory.

After they are returned, disassembly and cleaning begins and all worn parts are replaced with new ones. After assembly and testing, the customer receives back unions that are as good as new with an standard warranty.

When taking advantage of a warranty, the union must be returned UNOPENED. The cause of failure will be ascertained and, if so desired, the customer will receive a report for personal perusal. The result of the findings will decide whether the repair is performed on a charge or on a no-charge basis.

Numerous **DEUBLIN** products can be field repaired by the user. For every degree of wear there is a corresponding service kit available. These kits can be ordered at the **DEUBLIN** facility

complete with their respective repair instructions (refer to comments under number system).

Number System

DEUBLIN ordering numbers for standard rotating unions consist of 2, 3 or 4 number groups. Each group describes a particular characteristic feature such as application, seal combination or rotor connection (refer to ordering example).

Order numbers for service kits differ from their respective rotating union numbers by the insertion of a letter (B or C) which describes the extent of service. The letter B stands for a service kit plus and the letter C for a service kit (refer to ordering example).

All 54, 55 and 57 Series Rotating Unions are available for use in a potentially explosive atmospheres defined by "ATEX". Unions, that match the requirements for ATEX can be identified by an "X" between the first two number groups.

DEUBLIN

Rotating Unions 57 Series with Silicon Carbide Seals for Water Service, DN 10 - 50

- monoflow and duoflow design
- self-supported rotating union
- radial housing connection
- balanced mechanical seal
- pinned rotor seal
- easy and quick replacement of sealing components (rotor seal, floating seal)
- ball bearings lubricated for life
- for poor water quality
- 3 vent holes
- forged brass housing
- stainless steel rotor
- special options: threaded vent holes, bearings splash proof, nickel-plated versions

Operating Data

Max. Water Pressure		150 PSI	10 bar
Max. Speed, Rotor with Straight Threads:	Model		
	57-257	3,500 RPM	3,500 min ⁻¹
	357	3,000 RPM	3,000 min ⁻¹
	527-557	2,500 RPM	2,500 min ⁻¹
	657	750 RPM	750 min ⁻¹
Max. Temperature		90 °C	> 90 °C consult DEUBLIN

For further information please contact **DEUBLIN** or your local representative.

Torque Ratings 57 Series

DN	ft.lbs	Nm
10	0.18	0.25
15	0.37	0.50
20	0.74	1.00
25	1.48	2.00
32	1.62	2.20
40	2.14	2.90
50	3.32	4.50

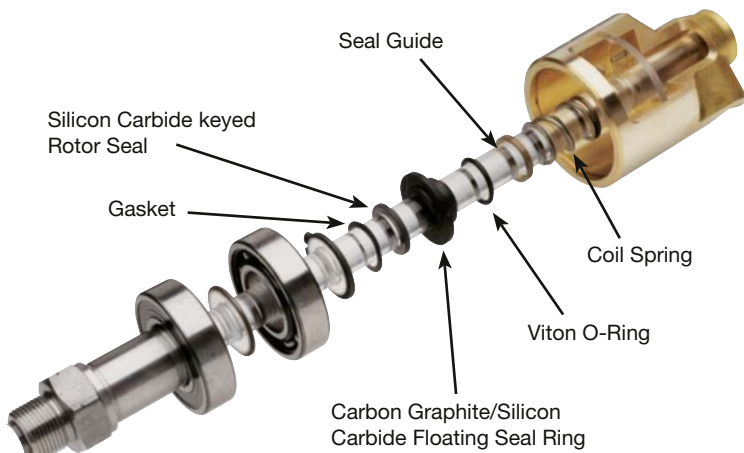

Seal Combination – Standard

- Carbon Graphite/Silicon Carbide
- long service life

Seal Combination – E.L.S. (Extended Life Sealing)

- Silicon Carbide/Silicon Carbide for severe conditions (poor water quality)

All 54, 55 and 57 Series Rotating Unions are available for use in a potentially explosive atmospheres defined by “ATEX”.

Union Repair

The 57 Series is designed for quick, easy replacement of both Floating Seal and the Rotor Seal.

The “57’s” seal is seated in a keyed counter bore at the rotor’s end. The worn seal simply lifts out and the new one drops right in. Since the entire rotor does not need to be replaced or relapped, the repair is fast, easy and on the spot. As you only replace the seals, the repair cost is very economical.

For Ordering Number of Repair Kit see page 5.

DEUBLIN

Rotating Unions 55 Series for General Purposes, DN 10 - 50

- monoflow and duoflow design
- self-supported rotating union
- radial housing connection
- balanced mechanical seal
- 3 vent holes
- forged brass housing
- stainless steel rotor
- special options:
threaded vent holes,
splash-proof bearings,
nickel-plated
and/or low torque design
- Lubrication Guide page 52

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Water Pressure	Model 55 -555	750 PSI	50 bar
Max. Water Pressure	Model 655	200 PSI	14 bar
Max. Saturated Steam Pressure (Intermittent)		14 PSI	1 bar
Max. Hot Oil Pressure		100 PSI	6,6 bar
Max. Speed, Rotors with Straight Threads:	Model 55 -255	3,500 RPM	3,500 min ⁻¹
	355	3,000 RPM	3,000 min ⁻¹
	525 -555	2,500 RPM	2,500 min ⁻¹
	655	750 RPM	750 min ⁻¹

Max. Temperature 120 °C > 120 °C consult **DEUBLIN**

Torque Ratings 55 Series

DN	ft.lbs	Nm
10	0.25	0.34
15	0.35	0.50
20	0.50	0.68
25	1.25	1.80
32	1.25	1.80
40	2.50	3.40
50	3.00	4.07

Seal Combinations – Standard

- Carbon Graphite/Bronze for water
- multi-purpose applications

optional:

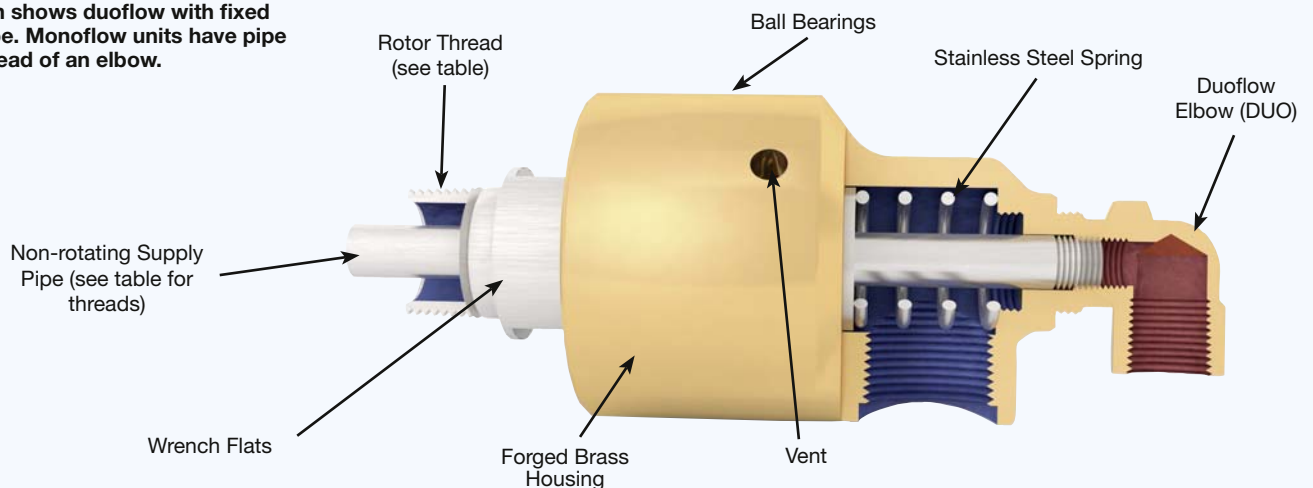

- Carbon Graphite/Ceramic for hot oil, hot water and saturated steam

Seal Combination – E.L.S. (Extended Life Sealing)

- Tungsten Carbide/Ceramic for severe conditions (poor water quality), max. temperature 90°C

All 54, 55 and 57 Series Rotating Unions are available for use in a potentially explosive atmospheres defined by "ATEX".

Illustration shows duoflow with fixed supply pipe. Monoflow units have pipe plugs instead of an elbow.

57 and 55 Series – Monoflow Rotating Unions DN 10 - 50

Monoflow unions are used when supply and return lines are connected to opposite sides of the cylinder or roll.

Duoflow Supply Pipe Installations

DEUBLIN water service unions can be adapted for Duoflow applications where a single media is circulated through and around the supply pipe. Duoflow elbows are available in 3 styles to accept a variety of different supply systems. The guidelines shown below should be carefully considered. A poorly designed supply system can contribute to premature union failure.

Where long pipes or high speeds are required, an adapter should be used to avoid transmitting stresses from heavy pipes, cascading water or vibrations to the union. A typical adapter is illustrated.

Threaded Pipe

The largest threaded supply pipe achieves the maximum flow rates available for a particular size union. Stresses at the pipe thread can cause breakage allowing the pipe to fall into the roll. For this reason pipe lengths longer than 4 union lengths ($4 \times D1$) and rotational speeds above 1,000 RPM should be avoided.

Fixed Tube

Thin wall stainless steel tube silver soldered into the Duoflow elbow produces the strongest, lightest weight assembly. The thinner wall sections allow greater flow rates than the largest tube available for a given size union. Tube lengths is usually limited to 6 union lengths ($6 \times D1$). Speeds to 3,500 RPM are possible.

Rotating Pipe

Rotating pipes are fastened internally to rotate with the roll. The Duoflow elbow helps to support the pipe and restrict crosstalk between passages. The pipe must be straight and concentric to the center line to avoid excessive loading of the union. The union must also have a rotor with a straight thread (Example 1" - 14" UNS) rather than a tapered pipe thread to assure concentricity. Rotational speeds above 1,000 RPM should be avoided.

57 and 55 Series – Elbows DN 10 - 50 for Fixed, Threaded Supply Pipe

Duoflow unions are used when supply and return lines are connected to one side of the cylinder or roll; non-supported pipe lengths no longer than 4 x D₂; max. speed 1,000 RPM; for higher speeds divided supply pipes must be used.

For rotating unions with pilot rotor, additional basic models and weight refer to page 8.

** DN 10 - 20 = hexagon
DN 25 - 50 = two wrench flats

57 and 55 Series – Elbows DN 10 - 50 for Rotating Supply Pipe

Duoflow unions are used when supply and return lines are connected to one side of the cylinder or roll; max. speed 1,000 RPM; for higher speeds divided supply pipes must be used.

For rotating unions with pilot rotor, additional basic models and weight refer to page 8.

** DN 10 - 20 = hexagon
 DN 25 - 50 = two wrench flats

57 and 55 Series – Elbows DN 10 - 50 with Divided Siphon Pipe (soldered)

Duoflow unions are used when supply and return lines are connected to one side of the cylinder or roll; soldered supply pipe; non-supported pipe lengths no longer than 4 x D2; max. speed 3,500 RPM;

For rotating unions with pilot rotor, additional basic models and weight refer to page 8.

* supplied by customer
 ** DN 10 - 20 = hexagon
 DN 25 - 50 = two wrench flats

57 and 55 Series – Elbows DN 10 - 50 with Flexible, Self-Centering Supply Pipe

Duoflow unions are used when supply and return lines are connected to one side of the cylinder or roll; fixed self-centering supply pipe; max. speed 3,500 RPM;

For rotating unions with pilot rotor, additional basic models and weight refer to page 8.

* supplied by customer
 ** DN 10 - 20 = hexagon
 DN 25 - 50 = two wrench flats

DEUBLIN

Rotating Union with Flange Rotor, DN 40, 50 and 65

- monoflow and duoflow design
- self-supported rotating union
- radial housing connection
- 3 or 4 vent holes
- forged brass housing (DN 40 and 50) and cast iron housing (DN 65)
- steel rotor
- Lubrication Guide page 52

Balanced mechanical seal:

- Standard: Carbon Graphite/Bronze or Carbon Graphite/Ceramic
- E.L.S. (Extended Life Sealing): Tungsten Carbide/Ceramic

+ For Monoflow design omit -117 or -139 suffix

DEUBLIN

Rotating Union 57 Series for Water Service, DN 80

- monoflow and duoflow design
- self-supported rotating union
- radial housing connection
- balanced mechanical seal
Carbon Graphite/Tungsten Carbide
- full-media flow
- easy and quick replacement of sealing components
(rotor seal, floating seal)
- vent holes
- cast iron housing
- steel rotor
- Lubrication Guide page 52

Operating Data

Max. Water Pressure	150 PSI	10 bar
Max. Satur. Steam Pressure (Interm.)	14 PSI	1 bar
Max. Speed	500 RPM	500 min ⁻¹
Torque 150 PSI/10 bar	6 FT.LBS	8,2 Nm
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

For further information please contact **DEUBLIN** or your local representative.

DEUBLIN

Rotating Union 54 Series

Stainless Steel, DN 10 - 40

- monoflow and duoflow design
- self-supported rotating union
- radial or axial housing connection
- media contacting parts made of stainless steel (from 1.4571)
- full-media flow
- available for use in potentially explosive atmosphere defined by "ATEX"

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Pressure and max. Speed see Diagram

Max. Temperature 71 °C > 71 °C consult **DEUBLIN**

Temperature > 71°C – max. 90 °C only if max. pressure ≤ 10 bar (150 PSI)

At temperatures > 71 °C (160 °F) media must be liquid (not vaporous)

Seals are Tungsten Carbide/Ceramic

Monoflow Rotating Union with Radial Thread

Monoflow Rotating Union with Axial Thread

* Adjust open vent downwards, or change one plug respectively

DEUBLIN

Rotating Union 6000 Series for Water Service, DN 50 - 100

- monoflow and duoflow design
- self-supported rotating union
- radial housing connection
- steel banded floating seal
- easy and quick replacement of sealing components (rotor seal, floating seal)
- full-media flow
- vent slots
- cast iron housing
- steel rotor
- Lubrication Guide page 52

Balanced mechanical seal:

- Standard: Carbon Graphite/Tungsten Carbide
- E.L.S. (Extended Life Sealing): Silicon Carbide/Tungsten Carbide

For applications above 120 °C please ask for information covering models of the series 6005/HT.

For further information please contact **DEUBLIN** or your local representative.

DEUBLIN Exclusive On-The-Machine Repair Cartridge

Seals are replaced quickly and easily. There's no need to remove hose connections or use special tools.

Make sure the system is cold and pressureless! Simply remove 6 hex bolts and end cap then remove floating seal cartridge and rotor seal face and replace with new seals.

Rotor seal is keyed and sealed to the rotor with a built-in O-Ring.

Replace end cap, hex bolts and safety wire.

Detailed instructions available from **DEUBLIN**.

DEUBLIN

Rotating Union F Series for Water Service, DN 125

- monoflow and duoflow design
- self-supported rotating union
- balanced mechanical seal:
Carbon Graphite/Tungsten Carbide
- two widely spaced ball bearings
- labyrinth seal protects bearings
- nickel-plated cast iron housing
- high corrosion resistant
- steel flange rotor
- on-the-machine seal replacement capability
- inlet/outlet flange:
standard DIN,
optional ANSI, JIS
- special designs up to **DN 300** upon request

Operating Data

Max. Water Pressure*	150 PSI	10 bar
Max. Speed*	750 RPM	750 min ⁻¹
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

* Operation at max. pressure combined with max. speed is not permissible
If operating conditions are marginal, please consult our Engineering Department

For further information please contact **DEUBLIN** or your local representative.

DEUBLIN

Rotating Union N Series for Steam or Hot Oil Service, DN 10 and 15

- monoflow design: N10
- monoflow and duoflow design: N12
- self-supported rotating union
- large carbon graphite bearing
- pressurised spherical carbon graphite seal
- cast iron housing
- stainless steel rotor

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Saturated Steam Pressure*	250 PSI	17 bar
Max. Temperature	400 °F	200 °C
Max. Hot Oil Pressure*	100 PSI	7 bar
Max. Temperature	446 °F	230 °C
Max. Speed*	750 RPM	750 min ⁻¹

* Operation at max. pressure combined with max. speed is not permissible

*F-dimension on NPT rotor threads = engagement depth (wrench tight)

DEUBLIN

Rotating Union 9000 Series for Steam, DN 20 - 50

- monoflow and duoflow design
- self-supported rotating union
- spherical seal; lapped Carbon Graphite Rings
- seal wear indicator allows preventive maintenance
- 2 torque lugs on the housing
- nickel-plated cast iron housing
- steel rotor, blackened for steam service

For hot oil applications please refer to models of our H-series on pages 27 - 30; Models with threaded rotor optionally available.

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Saturated Steam Pressure*	150 PSI	10 bar
Max. Speed*	400 RPM	400 min ⁻¹
Max. Temperature	185 °C	> 185 °C consult DEUBLIN

* Operation at max. pressure combined with max. speed is not permissible

Duoflow Rotating Union for Steam

Type A
for short threaded supply pipe

Type B
for long threaded supply pipe
With additional brace nut for supply pipe. Use pipes as per DIN 2440 only.

Type C
for rotating supply pipe with packing seals to avoid interpassage leakage.

** Dimensions refer to page 24

* Adhering to the same DN size, all unions can be combined with their respective elbows

** R dimension add 9 mm each

DEUBLIN

Rotating Union HPS Series for Steam Service in Corrugators, DN 40

Operating Data

Max. Saturated Steam Pressure	250 PSI	17 bar
Max. Temperature	400 °F	200 °C
Max. Speed	400 RPM	400 min ⁻¹

- monoflow and duoflow design
- self-supported rotating union
- seals and outboard bearing made of impregnated Carbon Graphite
- convex seal ring reduces compression on Carbon ring; better suited to handle mechanical and thermal shock
- external mechanism to adjust siphon pipe through end cap
- nickel plated front and rear end cap
- nickle-plated ductile iron housing
- stainless steel spring
- heavy duty steel rotor design

For further information please contact **DEUBLIN** or your local representative.

DEUBLIN

Rotating Union H Series for Steam or Hot Oil Service, DN 20 - 125

- monoflow and duoflow design
- self-supported rotating union
- designed for steam and hot oil applications in paper, plastics and textile industries
- effective on a variety of applications, especially on open gear paper machines
- pressurised spherical carbon graphite seal
- stainless steel counterface
- two widely spaced graphite bearings
- H57 – H127 optional with sight glasses in the end cap for visual inspection of condensate removal
- seal wear indicator allows preventive maintenance
- flanged or threaded rotor available
- cast iron housing
- stainless steel rotor

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Saturated Steam	Max. Pressure*	150 PSI	10 bar
	Max. Temperature	365 °F	185 °C
	Max. Speed*	3/4"-2"	400 RPM
	Max. Speed*	2 1/2"-5"	180 RPM
Hot Oil	Max. Pressure*	100 PSI	7 bar
	Max. Temperature	450 °F	232 °C
	Max. Speed*	3/4"-2"	400 RPM
	Max. Speed*	2 1/2"-5"	350 RPM

* Operation at max. pressure combined with max. speed is not permissible

Stainless Steel Rotor
with Quick Connect
Flange

Instrumentation Port
(optional)

Sight Gauge (Steam
Service Only)

B-Port is centered between two widely-spaced
Carbon Graphite bearings for equal

The rotating unions of the H Series can be used with the **DEUBLIN** Siphon Systems. Rotating and non-rotating siphon systems can be customised to meet any/all requirements. For further information please refer to our catalogue "Rotating Joints and Siphon Systems for the Paper Industry" or contact **DEUBLIN** directly.

Duoflow Central Pipe Specifications

Rotating Central Pipe

R For rotating siphon (steam inlet pipe) the inner pipe is connected by means of a threaded bushing that screws into the rotor.

Rotating Central Pipe axial Movement

E For a rotating siphon capable of axial movement a sliding connection is made between the bushing and the central pipe to allow for the thermal expansion of the central pipe.

DEUBLIN

Rotating Union 14000 Series for Air and Hydraulic Oil Service, DN 10 - 50

- monoflow design
- self-supported rotating union or in-the-shaft mounted
- balanced mechanical seal
Carbon Graphite/Ceramic – for air service;
Tungsten Carbide/Ceramic – for hydraulic service
- axial or radial housing connection by means of elbow
- lubrication storage within the seal cavity for air service
- heavy-duty design
- steel housing
- stainless steel rotor
- full-media flow

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Vacuum	2" Hg	7 kPa
Max. Hydraulic Pressure* (DN 10-20)	870 PSI	60 bar
(DN 25-40)	580 PSI	40 bar
Max. Speed* (DN 10-40)	1,500 RPM	1.500 min ⁻¹
(DN 50)	750 RPM	750 min ⁻¹
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

Recommended filtration of Hydraulic Oil: 5 µm
* Operation at max. pressure combined with max. speed is not permissible

For further information please contact **DEUBLIN** or your local representative.

Axial Version

In-the-Shaft Mounted Version

How to Order: Type a: 14037-03-094, straight-through version
Type b: 14037-03-094-118, with elbow

Type c: 14037-03-094-120, in-the-shaft mounted version
Type d: 14037-03-094-121, with elbow and O-ring.

* DN 10 - 20 = hexagon
DN 25 - 50 = two wrench flats

DEUBLIN Rotating Unions In-the-Shaft Mounted

To meet the specifications of engineering designs requiring minimum overhang, **DEUBLIN** can provide unions which can be mounted in the shaft. With these models the only extensions beyond the end of the shaft are the supply line connections.

Detailed drawings suggesting the application of these **DEUBLIN** Unions to your installation will be submitted on request and without obligation.

For additional models of In-the-Shaft Mounted Rotating Unions refer to page 31.

Model 1005-000-001, DN 6

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Hydraulic Pressure	1,020 PSI	70 bar
Max. Temperature	250 °F	120 °C
Max. Speed	3,500 RPM	3.500 min ⁻¹

Available with all 1005 rotors shown on page 33.

Model 1005-000-049, DN 6

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Hydraulic Pressure	1,020 PSI	70 bar
Max. Temperature	250 °F	120 °C
Max. Speed	3,500 RPM	3.500 min ⁻¹

Available with all 1005 rotors shown on page 33.

Model 1102-025-103, DN 8

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Hydraulic Pressure	1,020 PSI	70 bar
Max. Temperature	250 °F	120 °C
Max. Speed	3,500 RPM	3.500 min ⁻¹

Available with all 1102 rotors shown on page 33.

Model 1115-130-205, DN 10

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Hydraulic Pressure	510 PSI	35 bar
Max. Temperature	250 °F	120 °C
Max. Speed	3,500 RPM	3.500 min ⁻¹

Available with all 1115 rotors shown on page 33.

DEUBLIN

Rotating Union D Series for Water and Hydraulic Oil Service, DN 8 - 40

- monoflow design
- self-supported rotating union
- for hydraulic oil and water
- for swivel applications and high media pressure
e.g. for power steering applications on earth moving equipment or hose reels
- steel housing and end cap
- stainless steel rotor
- can be adapted for other media upon request

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Hydraulic/Water Pressure	6,530 PSI	450 bar
Max. Speed	20 RPM	20 min ⁻¹
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

DEUBLIN

Rotating Union 7100 Series for High Pressure Hydraulic Service, DN 8 - 20, Duoflow

- duoflow design
- self-supported rotating union
- hydrostatic bearing design
- wear-resistant bearing
- vent for controlled drainage, depending on pressure
- shaft seal for secondary sealing
- stainless steel housing
- hardened steel rotor

For further information please contact **DEUBLIN** or your local representative.

Operating Data

Max. Hydraulic Pressure	3,630 PSI	250 bar
Min. Hydraulic Pressure	40 PSI	3 bar
Max. Speed	500 RPM	500 min ⁻¹
Max. Temperature	60 °C	> 60 °C consult DEUBLIN

Higher pressure and speed on request.
Required Oil Cleanliness: class 17/15/12, ISO 4406

DEUBLIN

Rotating Union

DEU-PLEX for Air and Hydraulic Service, DN 8 - 20

- duoflow design
- Tandem model as triple passage design
- self-supported rotating union
- composite bearing
- vent holes between passages
- carbon-filled teflon seals
- hardened sealing surface
- aluminium housing
- steel rotor

Operating Data

Max. Air Pressure	150 PSI	10 bar
Max. Vacuum	2 "Hg	7 kPa
Max. Hydraulic Pressure*	3,050 PSI	210 bar
Max. Speed (short-term)*	250 RPM	250 min ⁻¹
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

* Operation at max. pressure combined with max. speed is not permissible

For further information please contact **DEUBLIN** or your local representative.

Additional models for high pressure hydraulic applications are available. Please contact **DEUBLIN** or your local representative.

Models with inner rotors

Models without inner rotors can be used for coaxial feed applications as shown below.

DEUBLIN

Rotating Union 1379 and 1479 Series 4-Passage for Various Media

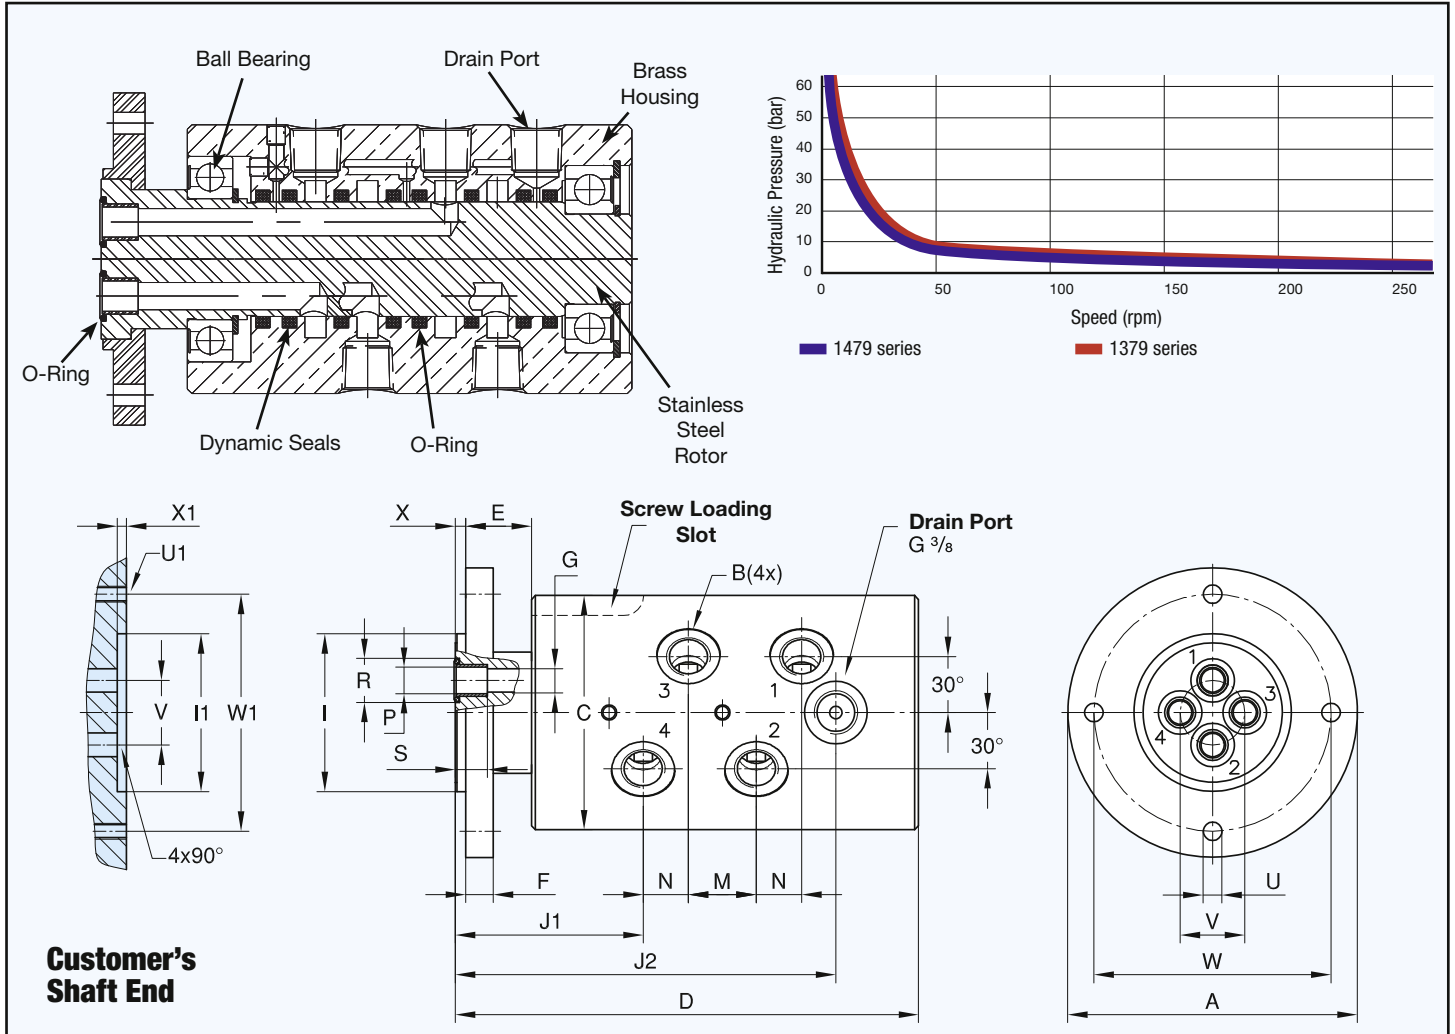

Operating Data

Max. Air Pressure*	145 PSI	10 bar
Max. Hydraulic Pressure (rotating)*	870 PSI	60 bar
Max. Hydraulic Pressure (very slow rotating)	3.626 PSI	250 bar
Max. Vacuum	2 "Hg	7 kPa
Max. Speed	250 RPM	250 min ⁻¹
Max. Flow per Passage		
1379 series	14 GPM	53 l/min
1479 series	28.5 GPM	108 l/min
Max. Temperature	80 °C	> 80 °C consult DEUBLIN
Filtration	ISO 4406 Class 17/15/12, max. 60 micron	

- four independent passages for applications such as clamping and unclamping, work piece or tool sensing, and spindle cooling
- vent between passages 2 and 3 allows use of two different media without cross contamination. For example, air in passages 1 and 2 and hydraulic oil in passages 3 and 4
- stainless steel and brass components resist corrosion
- hardened chrome sealing surface and elastomer-energized seals
- dual, widely spaced ball bearings absorb large side loads

For further information please contact **DEUBLIN** or your local representative.

* Operating conditions vary depending on the application and must be adjusted so as not to exceed the maximum union housing temperature rating of 90 °C.

DEUBLIN

1116 Series "Closed Seal" Rotating Unions for Continuous Coolant Service

- single passage for coolant or MQL
- closed seals for transfer line and similar applications
- full-flow design has no obstructions to trap swarf or debris
- bearing-supported with threaded rotor for easy installation
- deep groove radial ball bearings for smooth operation
- labyrinth system and large vents to protect ball bearings
- balanced mechanical seals made from silicon carbide for long life even under difficult operating conditions
- anodised aluminium housing resists corrosion

Operating Data

Max. Pressure		
Water-based Coolant	1,015 PSI	70 bar
MQL (oil mist)	145 PSI	10 bar
Max. Speed	12,000 RPM	12.000 min ⁻¹

DEUBLIN

1101 Series "Closed Seal" Rotating Unions for Continuous Coolant Service

- single passage for coolant or MQL
- closed seals for transfer line and similar applications
- full-flow design has no obstructions to trap swarf or debris
- bearing-supported with threaded rotor for easy installation
- deep groove radial ball bearings for smooth operation
- labyrinth system and large vents to protect ball bearings
- balanced mechanical seals made from silicon carbide for long life even under difficult operating conditions
- anodised aluminium components resist corrosion

DEUBLIN

1109 Series Pop-Off™

Rotor-Mounted Rotating Unions for Coolant Service with Dry Running

- single passage for coolant or MQL
- Pop-Off™ technology allows unlimited dry running without media pressure
- full-flow design has no obstructions to trap swarf or debris
- bearing-supported with threaded rotor for easy installation
- dual ABEC 7 (ISO class P4) angular contact ball bearings
- labyrinth system and large vents to protect ball bearings
- balanced mechanical seals made from silicon carbide for long life even under difficult operating conditions
- aluminium housing, endcap anodised resists corrosion

DEUBLIN

Rotating Union 2400 Series for Water Service at Continuous Casting Steel Plants, DN 15 - 40

Operating Data

Max. Water Pressure	150 PSI	10 bar
Max. Speed	100 RPM	100 min ⁻¹
Max. Temperature	120 °C	> 120 °C consult DEUBLIN

- monoflow and duoflow design
- in-the-shaft mounted rotating union
- flanged housing or mounted with retaining plates
- high-wear resistant balanced mechanical seal
Silicon Carbide/Silicon Carbide
- brass housings and elbows
- stainless steel rotors and supply pipes
- for poor water quality
- long composite bearing
- bearing protected by O-ring
- full-media flow

For further information please contact **DEUBLIN** or your local representative.

DEUBLIN

Special Models for Customized Applications

Model SP0152

Rotating Union 7-Passages for Compressed Air (3-Passages) and Hydraulic Oil (4-Passages)

- ball bearing supported version
- all passages capable of dry running
- combination of three sealing technologies
- flange version

Possible applications:
Turn tables in machine tools

Operating Data

Media	Compressed Air / Hydraulic Oil	
Max. Speed	500 min ⁻¹	500 RPM
Max. Pressure		
Compressed Air	8 bar	116 PSI
Hydraulic Oil	200 bar	2,900 PSI
Max. Temperature	70 °C	158 °F

Model SP0436

Rotating Union 2-Passages for Compressed Air

- contact-free sealing with controlled leakage
- ball bearing supported version
- flange version
- radial housing ports G^{3/8}

Possible applications:
Plastics industry, machine tool industry, general machine builder

Operating Data

Media	Compressed Air	
Max. Speed	350 min ⁻¹	350 RPM
Max. Pressure	8 bar	116 PSI
Min. Pressure	1 bar	14.5 PSI
Max. Temperature	70 °C	158 °F
Dry run (without media)	possible	

Model 7100-1010 + SP0077

Rotating Union 3-Passages with hydrostatic seal

- for spraying-clamping-unclamping applications at steel strip rewinders

in Combination with SP0077 (2-Pass.)

- the winding mandrel gets supplied with grease, to lubricate the moving elements of the rewriter
- housing ports G^{3/8}

Possible applications:
Steel industry, e.g. rewinders

Operating Data

	7100-1010		SP0077	
Media	Hydraulic		Grease	
Max. Speed	450 min ⁻¹	450 RPM	600 min ⁻¹	600 RPM
Max. Pressure	100 bar	1,450 PSI	400 bar	5,800 PSI
Max. Flow	300 l/min	80 GPM	20 l/min	5.3 GPM
Max. Temperature	70 °C	158 °F	70 °C	158 °F

DEUBLIN

Special Models for Customized Applications

Model SR0020

Slip Ring 10-Channel with Rotating Union 1-Passage for Data Transmission, Power Supply and Compressed Air

- compact design
- gold-plated slip rings
- brushes made of precious metal
- ball bearing supported
- flange version

Possible applications:

Automotive industry, robotics, general machine builder

Operating Data

Media	Compressed Air	
Max. Speed	250 min ⁻¹	250 RPM
Slip Ring		
Power Supply	5x 30 V, 10 A	
Profinet	5x 30 V, 2 A	
Max. Pressure	10 bar	145 PSI
Max. Temperature	50 °C	122 °F

Model 6506-230-131032

Rotating Union 2-Passages for Hot Oil Applications in the Plastics Industry

- ball bearing supported version
- utilization of heat stabilized ball bearings lubricated with high temperature grease
- easy to install due to housing ports for SAE flanges and flange rotor

Possible applications:

Hot oil application up to 160 °C and high speeds, e.g. foil production

Operating Data

Media	Hot Oil	
Max. Speed	1.300 min ⁻¹	1,300 RPM
Max. Pressure	10 bar	145 PSI
Max. Flow	135 l/min	36.5 GPM
Max. Temperature	160 °C	320 °F

Model 7000-081

Rotating Union 1-Passage ATS – Around The Shaft Installation

- high speed application
- designed for dry air

Possible applications:

Packaging and textile industry

Operating Data

Media	Compressed Air	
Max. Speed	1.500 min ⁻¹	1,500 RPM
Max. Pressure	10 bar	145 PSI
Max. Temperature	93 °C	200 °F

Relubrication Guide for DEUBLIN Rotating Unions

All **DEUBLIN** Rotating Unions are factory lubricated and tested, ready for installation. Unions not equipped with grease fittings are lubricated for the life of the union and require no further maintenance. Rotating unions, which are equipped with grease fittings, may require periodic lubrication to replace the grease which has dissipated. Overgreasing can be as damaging to the union as undergreasing, particularly in high-speed applications. Relubrication frequency and amounts of grease vary greatly depending on union size, operating temperature, rotation speed, moisture, etc. The following charts and table provide approximate lubrication frequency and amounts of grease for light and moderate service conditions.

When relubricating **DEUBLIN** Rotating Unions, use CHEVRON SRI GREASE NLGI 2. Only low-pressure grease equipment should be used to prevent damage to the bearings and seals. This is a general guide that should be used judiciously. The user must make adjustments as experience dictates. For more specific information, contact your local lubricant supplier.

Relubrication			
Model	Amount of Grease (g)	Model	Amount of Grease (g)
55	3,5	655	18
155	5,5	755 / 857	42
255	10	6200	18
355	10	6250	42
525	12	6300	68
555	18	6400	90

For further information please request our separate Lubrication Guide.

Relubrication Interval

Light Service

Temperatures up to 75 °C
little, if any, vibration or moisture (humidity)

Moderate Service

Temperatures 75 °C - 120 °C
some vibration and moisture present

Important Information

A DEUBLIN Union is a precision-made piece of equipment and must be handled accordingly. Sealing between the rotating device – rotor – and the static device – stator – is mainly accomplished via floating seals. Improper use could result in premature leakage or failure.

Although DEUBLIN Unions are of the highest quality and precision they are, by their very nature, a “wear and tear” product. It’s important that they should be inspected periodically. Moreover, when seals wear out, the rotating union must be replaced or repaired to avoid subsequent leakage. Once a union begins to leak, it is paramount that the union be repaired immediately. Never work with leaking unions!

DEUBLIN Unions must never be used for applications other than those specified in the catalogue. It is strictly prohibited to use DEUBLIN Unions with hydrocarbons or other flammable media as leakage may result in a fire or explosion. The use of our product on exotic or corrosive media is strictly prohibited without our prior approval. For applications other than those stated in the catalogue, the DEUBLIN Engineering Department should be contacted for proper instructions. These instructions are provided by DEUBLIN as general guidelines and do not contain exhaustive information about the installation, use or maintenance of unions.

Operating instructions and installation manuals are available for the greater part of DEUBLIN products. Buyers and users of DEUBLIN Unions should be certain that they have reviewed all of DEUBLIN’s product information. The operating and installation instructions must be strictly adhered to when installing DEUBLIN unions.

Factory Testing

All DEUBLIN Unions are factory-tested under pressure prior to shipment. This thorough check ensures that each single DEUBLIN Union is completely operational when you receive it and can – in most cases – be installed with no further consideration.

Warranty

The buyer’s warranty rights assume that the product shipped be inspected upon receipt and all defects reported to DEUBLIN in writing immediately or for no longer than a period of 2 weeks. Hidden defects must be reported to DEUBLIN in writing immediately upon detection. The warranty is void when the DEUBLIN Rotating Union is tampered with or misused in any way. Otherwise, our General Terms of Sale and Delivery are valid. It cannot be emphasised enough that all dynamic seal components are wear parts.

DEUBLIN will not be held liable for damage resulting from improper use, incorrect warehousing, incorrect transport, faulty assembly, faulty operation, insufficient maintenance, incorrect handling, improper installation by the customer, the use of inappropriate accessories or spare parts and natural abrasion. Please request our General Terms of Sale and Delivery.

Lubrication and Maintenance

Depending on the DEUBLIN product series and the operating parameters all DEUBLIN Unions are lubricated for life or have to be relubricated or serviced according to specially defined intervals. Please follow the respective operating instructions or the general “Relubrication Guide” for DEUBLIN Rotating Unions.

Filtering

The service life of the seal is largely determined by filter quality and thus of vital importance for the perfect operation of the rotating union. We recommend a filtering of min. 60 µm. It goes without saying that all installation and operating instructions must be carefully reviewed and strictly adhered to.

Repair Service and Maintenance of DEUBLIN Unions by DEUBLIN

Use only DEUBLIN spare parts for repair of the DEUBLIN Rotating Unions. Prior to repair contact DEUBLIN or any authorised DEUBLIN representative. You can find a local DEUBLIN representative at the following internet site: www.deublin.eu.

Most unions can be reconditioned in the field by use of DEUBLIN Repair or Rebuilding Kits (see page 5). Generally, we recommend having the DEUBLIN Rotating Unions repaired by DEUBLIN. Repair Service is available at all DEUBLIN factories. Factory rebuilt unions carry a “New-Union-Warranty”.

Tension-free Installation

When installing rotating unions, special attention has to be paid to a flexible and tension-free hose connection. For further suggestions please refer to our installation instructions.

	Units SI	Units of Measure in Common Use:							Conversion Factors

M 35x1.5	250	50
M 50x1.5	350	50
M 65x1.5	350	10

Note: Tightening torques correspond to shaft made from steel and apply for elastomer sealed rotors.

Exception: Rotors with British Standard Pipe Thread (G 1/8 A thru G 3A), normally sealed with gaskets per DIN 7603.

Tightening Torque for Housings

B Port Thread	Material of Housing or Endcap		
	Brass	Aluminium Alloy	Stainless Steel
	Tightening Torque [Nm]		
G 1/8	5	10	15
G 1/4	10	15	25
G 3/8	25	30	50
G 1/2	50	80	125
G 3/4	100	120	200
G 1	150	300	400
G 1 1/4	200	350	500
G 1 1/2	250	400	600
G 2	300	400	400
G 2 1/2	400	400	400

Note: The tightening torques correspond to fittings sealed with gaskets per DIN 7603.

Tightening of fittings with NPT thread using the FFFT method

- Wrap the thread of the fitting in clockwise direction, beginning from thread end, with 1½ to 2 turns of Teflon tape. If any sealing compound is used, the first one or two thread pitches, beginning thread end, must remain untreated.
- Screw in the fitting firmly, finger-tight.
- Apply, with a waterproof marker a longitudinal marking onto any flat of the hexagon. Continue the marking on housing or endcap surface.
- Tighten the fitting further with a wrench by using the FFFT method (= Flats From Finger Tight) for the necessary number of flats (see table on the right).

Thread Size NPT	Number of Flats (FFFT)
1/8 – 27	2.0 – 3.0
1/4 – 18	2.0 – 3.0
3/8 – 18	2.0 – 3.0
1/2 – 14	2.0 – 3.0
3/4 – 14	2.0 – 3.0
1 – 11½	1.5 – 2.5
1¼ – 11½	1.5 – 2.5
1½ – 11½	1.5 – 2.5
2 – 11½	1.5 – 2.5

Attention! Never untighten the pipe fitting to achieve any adjustment!

Between 3½ to 6 thread pitches must be engaged.

Any deviation indicates too lighter tightening or overtightened screw joint or thread beyond allowed tolerance limits.

In case of too light tightened screw joints, retightening up to maximum one turn is permissible.

NPT → G (BSP) Stainless Steel Adapters

DEUBLIN Rotating Unions are equipped with G (BSP) and NPT hose connections. Due to worldwide interchangeability our adapters allow the fitting of hoses with the appropriate NPT or G (BSP) threads.
